## REASONS FOR AIR BUBBLE FORMATIONS ON ACRYLIC SHEETS

To avoid delamination / air bubbles in between ply and laminate the above steps should be taken care of. Bonding of acrylic sheets shouldn't be completed under high humidity

Acrylic are bonded in extremely humid conditions

Debonding in certain areas because of uneven substrate surface

Use of water base synthetic resin adhesive any other the PEVA (Polyethylene Vinyl Acetate Co-polymer)

Insufficient or lack of pressing during the bonding period of laminate

When substrate loses moisture after installation

Use of extremely large acrylic/PVC laminate sheets (more than 8 ft x 2 ft long)

## DISCLAIMER

Do not use plywood with high moisture content. Do not use ply with uneven surface, Avoid using inferior quality adhesive, Apply sufficient pressure We do not recommend pasting of sheets on the printed/branding area of the plywood

## DO'S & DON'T'S

1. Store the laminates below 30°C temperature. To avoid the inside cracks & stretch line, do not store acrylic sheet in roll form.
2. Clean the surface of laminate with water and clean, non-abrasive cloth. We recommend cleaning with COLIN glass cleaner and soft Micro fibre cloth.
3. Glossy surfaces recommended to use in vertical applications.
4. Do not use alcohol based cleaners, solvent, petrol or oil as these may damage the surface of the laminate. Do not use cloth other than micro fibre.
5. Do not use thinner on the surface of CRYSTALINE laminates.
6. Do not place hot cookware directly on the laminate as the exposure to temperatures above 30°C may cause damage to the laminate surface.
7. Outdoor application of the laminate with exposure to direct sunlight and weather conditions are strict not recommended. UV rays may de-shape the laminate.
